

AXA REMOTE 2.0™

Remote-controlled
window openers

VENTILATE EASILY AND
SECURELY WITH THE AXA REMOTE

AXA HOME SECURITY

AXA Remote 2.0™

**EXPERIENCE THE EASE OF THE SMARTEST,
MOST SECURE AND MOST COMFORTABLE VENTILATION**

With the remote-controlled **AXA Remote 2.0™**, you can open and close each window in your home easily and securely. No more neck-breaking stunts on dauntingly narrow stools, but natural ventilation and fresh air with a single press on the button of your remote control.

HEALTHY LIVING? GOOD VENTILATION!

Good ventilation is important, as it ensures a healthier and more comfortable indoor climate. Exhaled air, germs, allergens, dust, odours and micro-organisms disappear from your home, and moisture is also removed, so unhealthy fungi and dust mites don't stand a chance.

ADEQUATE VENTILATION

Good to know: the AXA Remote has a ventilation capacity that meets the Building Decree standards for ventilation (NEN 1087 and NEN 8087), in which a minimum ventilation of 25 m³ per hour is required for a window surface of 0.26 m² for each living area. For this window size, the AXA Remote is able to adequately ventilate an area of 22.5 m². Due to its many opening possibilities, the AXA Remote is also suitable for aeration.

EACH WINDOW WITHIN ARM'S REACH

After all, many people often leave awning, bottom-hung casement or roof windows closed, because they are often located in awkward places or because people have physical disabilities. Luckily there's AXA: the Remote now brings each window within arm's reach!

SOLUTION FOR EVERY WIDTH

The standard AXA Remote is suitable for virtually all awning, bottom-hung and casement windows up to 100 x 100 cm. For casement windows, the window must be at least 30 cm wide, and for awning and bottom-hung windows, the window must be at least 30 cm high. The AXA Remote 2.0™ S has been designed especially for wide awning windows of between 100 and 140 cm. This duo set (supplied by an adapter) is attached by a smart cord, allowing movements to be synchronised and your wide top-hung windows to be opened and closed effortlessly.

A SINGLE REMOTE CONTROL FOR EASE OF USE

The user-friendly remote control can be used to open and close each window easily. The AXA Remote is also excellent for combining with a fly screen or net curtains. And to make it perfectly easy for you, you can operate several windows with a single remote control. Conversely, one closing unit can be operated by eight different remote controls.

PERMANENT BUTTON IN PERMANENT POSITION

If you wish, the remote control can also be replaced or combined with a wall control, ideally in situations where a permanent operating position is required, such as in public areas, schools, day nurseries or sports halls. The wall control is also a good solution when a window is 'deep'-set, and is therefore difficult to reach with the infra-red remote control. This wall control can be used as both a free-standing or a built-in unit.

CHOOSE YOUR DESIGN: WHITE, GREY OR ALULINE

Windows should also be pleasing to the eyes, which is why AXA's designers have opted for the sustainable plastic casing in three stylish colours: white, grey and aluline. So there is always one to match your frame.

BURGLARS DON'T STAND A CHANCE

The AXA Remote is an extremely secure product. Thanks to the four billion codes in circulation, it is even impossible for the smartest burglar to open your window using a different remote control. In addition, the AXA Remote with SKG** also complies with all stringent requirements (for wooden window frames) stipulated by the Police Hallmark for Safe Living and SKG.

SECURITY IS OF THE UTMOST IMPORTANCE

Thanks to its advanced closing system, the window is closed with a pulling force of at least 400 N, which is similar to the hand-operated AXAflex combi opener and more than enough to draw the window into its draught rubbers, making it wind and waterproof. As soon as something threatens to get stuck between the window and the frame, the closing mechanism is interrupted by the anti-finger clamping system and the AXA Remote opens automatically.

EASY INSTALLATION, LONG-TERM ENJOYMENT

The AXA Remote is easy and quick to mount. The supplied drilling template, universal screws (4.0 x 40 mm) and the window opener's excellent flexibility guarantee sturdy and optimal attachment, allowing you to enjoy the comfort of your AXA Remote for many years to come.

CHOOSE YOUR COMFORT: BATTERIES OR MAINS SUPPLY

Even the AXA Remote's power supply is comfortable: universal batteries supply the window opener and the remote control with power for many years, so there is no need for problematic and unattractive wiring. The low-battery indicator warns you when the batteries are almost empty and guarantees that your window always ends up in a closed position. If wiring is not a problem, you can also connect the AXA Remote to the mains supply using an optional adapter.

SOLUTION FOR ROOF WINDOWS

From now on, it is no longer necessary to use a step or chair to open your roof window either. With your AXA Remote 2.0 and the Classic roof window set, you can open and close virtually any drop and close roof window remotely. And for the latest generation of Velux windows, there is the Special roof window set.

THE 25 EXCELLENT BENEFITS OF THE AXA REMOTE 2.0™

MAXIMUM COMFORT

- Natural ventilation for a healthy indoor environment
- Operation from your armchair
- A single remote control for several windows
- Can also be wall-operated
